

**MATH 3140– Homework 11**

**Due: Monday, 26 November 2018**

**Exercises:** Ch. 11. 7, 11, 16, 17, 18.

**11.7** In the group  $\mathbb{Z}_{24}$ , let  $H = \langle 4 \rangle$  and  $N = \langle 6 \rangle$ .

- (a) List the elements in  $HN$  (we usually write  $H+N$  for these additive groups) and  $H \cap N$ .
- (b) List the cosets in  $HN/N$ , showing the elements in each coset.
- (c) List the cosets in  $H/(H \cap N)$ , showing the elements in each coset.
- (d) Give the correspondence between  $HN/N$  and  $H/(H \cap N)$  described in the proof of the Second Isomorphism Theorem.

**11.11** Show that a homomorphism defined on a cyclic group is completely determined by its action on the generator of the group.

**11.16** If  $H$  and  $K$  are normal subgroups of  $G$  and  $H \cap K = \{e\}$ , prove that  $G$  is isomorphic to a subgroup of  $G/H \times G/K$ .

**11.17** Let  $\varphi : G_1 \rightarrow G_2$  be a surjective group homomorphism. Let  $H_1$  be a normal subgroup of  $G_1$  and suppose that  $\varphi(H_1) = H_2$ . Prove or disprove that  $G_1/H_1 \cong G_2/H_2$ .

**11.18** Let  $\phi : G \rightarrow H$  be a group homomorphism. Show that  $\phi$  is one-to-one if and only if  $\phi^{-1}(e) = \{e\}$ .
